Project — SAP Supply Chain Management System: (2022 – Present)

Description:

Worked on SAP-based Supply Chain Management applications used for procurement, inventory management, warehouse operations, logistics tracking, and order processing across enterprise clients. Responsible for automation testing, regression validation, API testing, and CI/CD quality assurance for critical SCM workflows.

- ③ Designing and implementing scalable Selenium-based automation frameworks using Java and TestNG to accelerate regression cycles and enhance test efficiency by 40%. Orchestrating end-to-end QA activities including requirement analysis, sprint test planning, and ensuring high-quality deliverables within Agile (Scrum) environments.
- ③ Developing and maintaining robust automated regression and data-driven test suites to ensure comprehensive validation of web applications. Integrating automated test suites with Jenkins pipelines to enable continuous testing, faster feedback loops, and seamless DevOps alignment.
- ③ Coordinating UAT cycles with clients, driving defect triage and resolution, and performing API validation using Postman to ensure end-to-end system integrity.

Highlights:

- ③ Spearheaded the design and implementation of a scalable Selenium + TestNG automation framework, accelerating regression cycles and improving test coverage by 75%, resulting in enhanced release reliability and reduced manual testing effort.
- ③ Orchestrated end-to-end integration of automated test suites within Jenkins CI/CD pipelines using Git, enabling continuous testing and reducing build validation time, while increasing deployment frequency by 70% with zero critical defects leakage.
- ③ Engineered robust API automation suites using REST Assured and Postman, achieving validation accuracy across services & reducing defect identification cycle time, strengthened SQL-based backend validation to ensure 50% data integrity compliance.
- ③ Led Agile QA initiatives across multiple sprints, driving test strategy, defect lifecycle management (JIRA/Bugzilla), and crossbrowser validation, resulting in reduction in production defects and improving sprint quality metrics by 80%, ensuring seamless and high-quality releases.
- ③ Championed team upskilling and AI integration into daily workflows by conducting performance reviews, standups, and work status reviews, while leveraging AI for Test case/scenario creation, script debugging, and test script development, as well as training the team in AI- Driven automation, improving team productivity and accelerating onboarding of automation practices.

DBS Bank, Hyderabad
Sr. Quality Analyst
Key Result Areas:

Sep'21 – Sep'22

Project — DBS Digital Investment & Bonds Banking Platform: (2021 – 2022)

Description:

Worked for DBS Bank Singapore on digital banking applications focused on bonds, investments, and wealth management services. Involved in validating investment workflows, customer onboarding, transaction processing, API integrations, and backend financial data validation for secure and reliable banking operations.

- ③ Analyzed BRD/FRD artifacts and engineered comprehensive test scenarios and test cases leveraging Boundary Value Analysis (BVA) and Equivalence Class Partitioning (ECP) techniques to ensure optimal test coverage.
- ③ Executed functional, regression, and integration testing for complex banking applications, ensuring high system reliability and business continuity.
- ③ Identified high-impact defects and minimized production leakage by implementing robust defect tracking, triaging, and resolution workflows using JIRA.
- ③ Conducted extensive cross-browser testing and validated critical financial workflows to guarantee seamless user experience across multiple platforms.
- ③ Supported UAT cycles by collaborating with stakeholders and business users, ensuring alignment with banking standards and regulatory compliance requirements.

Coverfox Insurance, Mumbai
Sr. Quality Assurance
Key Result Areas:

Jun'20 – Aug'21

Project — Insurance Policy

Management Platform: (2020 – 2021)

Description:

Worked on an insurance aggregation platform handling health, motor, and life insurance plans. The application supported policy comparison, premium calculation, payment processing, policy issuance, and claims-related workflows for multiple insurance providers.

- ③ Developed comprehensive test cases and executed both manual and automated testing for insurance policy platforms, ensuring robust validation across critical modules.
- ③ Validated premium calculation engines, payment gateway integrations, and API responses to ensure transactional accuracy and seamless system interoperability.
- ③ Performed regression and data-driven testing to maintain release integrity and minimize post-deployment defects.
- ③ Collaborated with development teams for effective defect triaging and root cause analysis while enhancing regression suite documentation to improve overall test coverage and maintainability.

Testbook.com, Navi Mumbai

May'19 – Jun'20

Senior Quality Analyst

Key Result Areas:

Project — Government Exam

EdTech Platform: (2019 – 2020)

Description:

Worked on an EdTech platform designed for competitive government exam preparation, providing mock tests, live classes, performance analytics, and course management for students preparing for banking, SSC, railways, and state government examinations.

- ③ Executed functional, regression, and cross-browser testing for EdTech web applications, ensuring consistent performance and seamless user experience across platforms.
- ③ Developed and implemented Selenium-based automation scripts for repetitive test scenarios, enhancing execution speed and reducing manual effort.
- ③ Performed database validation using SQL queries to verify data accuracy, consistency, and backend integrity.
- ③ Reduced testing cycle time through parallel execution strategies while ensuring release readiness by coordinating sprint testing activities and delivering insightful test reports.

Cartronics Technologies, Bengaluru

Oct'16 – Nov'19

Senior Quality Analyst

Key Result Areas:

Project 1 — School Billing & Student Management System: (2016 – 2018) as a Junior QA

Description:

Worked for a centralized application used by schools to manage student admissions, fee collection, transport billing, attendance, and report generation across multiple branches.

Project 2 — E-Commerce Order Management System: (2018 – 2019) as a Senior QA

Description:

Worked for an online e-commerce platform handling customer orders, inventory tracking, payment transactions, and shipment processing with high transaction volumes.

- ③ Designed and executed comprehensive test plans and test cases derived from in-depth requirement analysis, ensuring thorough validation of business and functional requirements.
- ③ Performed end-to-end testing for web-based applications, ensuring system integrity, seamless workflows, and high-quality user experience.
- ③ Conducted UAT cycles and collaborated closely with clients during release phases to ensure alignment with business expectations and successful go-live outcomes.
- ③ Managed the end-to-end defect lifecycle with detailed reporting while building reusable regression test suites to support continuous releases and enhance test efficiency.
